When or how to enable the ChatGPT Developer Mode UI components for Apps SDK?

hammergpt

When or how can enable the ChatGPT Developer Mode UI components for Apps SDK?🤣

I thought Developer Mode already had the preview available, so I built an app specifically for that —
but it can't render inside ChatGPT.

Asterisk / Realtime API with SPI : Getting a "BYE" after a few seconds

C   Communication
     Communication_JobPho

Hello there!

I'm trying to set up OpenAI with the new SIP module from my own Asterisk server. My goal is to call the AI agent and put it on a conference using CONFBRIDGE.

Is it possible to have the user interact with the agent?

Kim
kim1

I'm playing around with the new agent builder.

Is there any way to make a user interact with parts of the flow? fx an agent needs to gather information from a user and once satisfied it needs to continue? I tried with a while loop and set the global state, but it never broke out of the loop.

How to limit number of input images processed by image_generation tool via Responses API?

rus1243mor

Hi all,

I'm using the Responses API with the image_generation tool. My chat sometimes contains a lot of images *sent by users as input* (not the generated images), which makes the processing expensive. It looks like image_generation processes every image previously sent by the user every time I call it, increasing the cost.

Access session user within the agent builder UI

awx

Hey. How can we access a current user (passed to the session when it was created from ChatKit) inside the agentic workflow? Right now, we have an option to pass a user to the ChatKit session

(**https://platform.openai.com/docs/api-reference/chatkit/sessions/create#chatkit-sessions-create-user**), but there is no way to get that value and use it inside the tool (or an MCP server). All existing templates (flows) in the agent builder cover simple use cases, but any suggestions on how to inject different users(can be userID or user token)?

The health screenshots don't give me enough to conclude much more about volume other than this is likely a single-user scenario, with a period of no usage that would be atypical for having an established user base.
